

Grade Review: Decomposition Plan

Hi Kiran,

Good work in putting together a very thorough plan. I am approving your plan.

I have some suggestions though. If you're using Menu, and if you use a join, it is a many to many relationship and will result in the rows being replicated and consequently the metrics could be inflated unless you carefully deduplicate them before calculation. This could be tedious in Tableau. The alternative is to use Relationships instead of Joins. Please use this link to understand the difference between relationships and joins in Tableau.

https://help.tableau.com/current/online/en-us/datasource_relationships_learnmorepage.htm

Looking forward to the rest of your project with analyses and story. Remember, the deliverables are:

- Your report (pdf version) with your story, consisting of your findings against the visuals and conclusions logically leading to actionable business recommendations.
- Link to your Tableau dashboard (if you're using Power BI, include the .pbix file in your submission)

best,

Grade review: Final Project

Excellent work, Kiran! You did a very thorough job.

I am approving your project, congratulations!!

For further enhancing your project, one thing you could try doing is to map cuisines preferences by geography and generate insights based on that.

Good luck with the rest of the program!

best,

Bipin Karunakaran • reviewer
